Unleash the Power  
of Your Parking Systems

powered by  
Cloud9

## Award-Winning 8D APMS™: The World's Most Advanced Parking Solution [Automated Parking Management System]

1. Upgradeable Modular Design Brings Unprecedented Capabilities to New AND Existing Units
2. Evolutive Secure Real-Time Wireless E-Payment
3. Proven Technology Currently Implemented in Public Environment
4. Highest Level of Remote Monitoring: Real-time Access to Data - Per Unit and Globally
5. Technology YOU can Manage: Fast Upgrade capacity and On-the-Fly Configuration by Owner
6. Evolves with Your Needs and Creativity for Years to Come
7. Integrated Low-Power Management of All Functions
8. Allows Officers to Monitor Parking Status from a Wireless Personal Digital Assistant (PDA) or any other Wireless Devices
9. Turnkey Client Management Solution: Terminal (with the 8D ECO™ Embedded Module), Payment Server, Parking Manager, Management Console and Solution on a PDA

8D APMS™ Turns Your  
Parking Machines Into  
Intelligent, Fully  
Programmable Wireless  
Payment Terminals

## 8D APMS: The Revolutionary Technology that Optimizes Parking Revenue

8D APMS™ is a truly revolutionary transactional solution that allows you to add all the functions and controls you can think of to any new or existing parking machine - or overall system. The embedded Cloud9™ software controls all local functions and ensures secure online wireless payment, as well as the sharing of all other information with your central systems, financial systems and/or your mobile agents. Pay & Display, Pay & Go, secure payment, and superb low energy management even in extreme climates, you can have it all - the way you want it - with 8D APMS's field proven technology. 8D APMS™ lets you create the parking systems you've been dreaming of and improves your bottom line, right now!

## 8D APMS: Ensures Total, Custom-Tailored Management of all Parking Functions

Rapidly programmed and installed, the 8D APMS™ solution brings unlimited creativity to parking management. You may choose a simple Pay & Display solution or opt for our tested Pay & Go approach, which provides the parking officers' PDA with the payment status of every parking space without the client having to go back to display the receipt on his dashboard. Multi-space management, variable rating (according to time of day or period of year), and other specific capacities can all be readily implemented. All data can be monitored and managed online from a central office with a user-friendly payment server - and data transmission is compatible with widely recognized wireless standards.

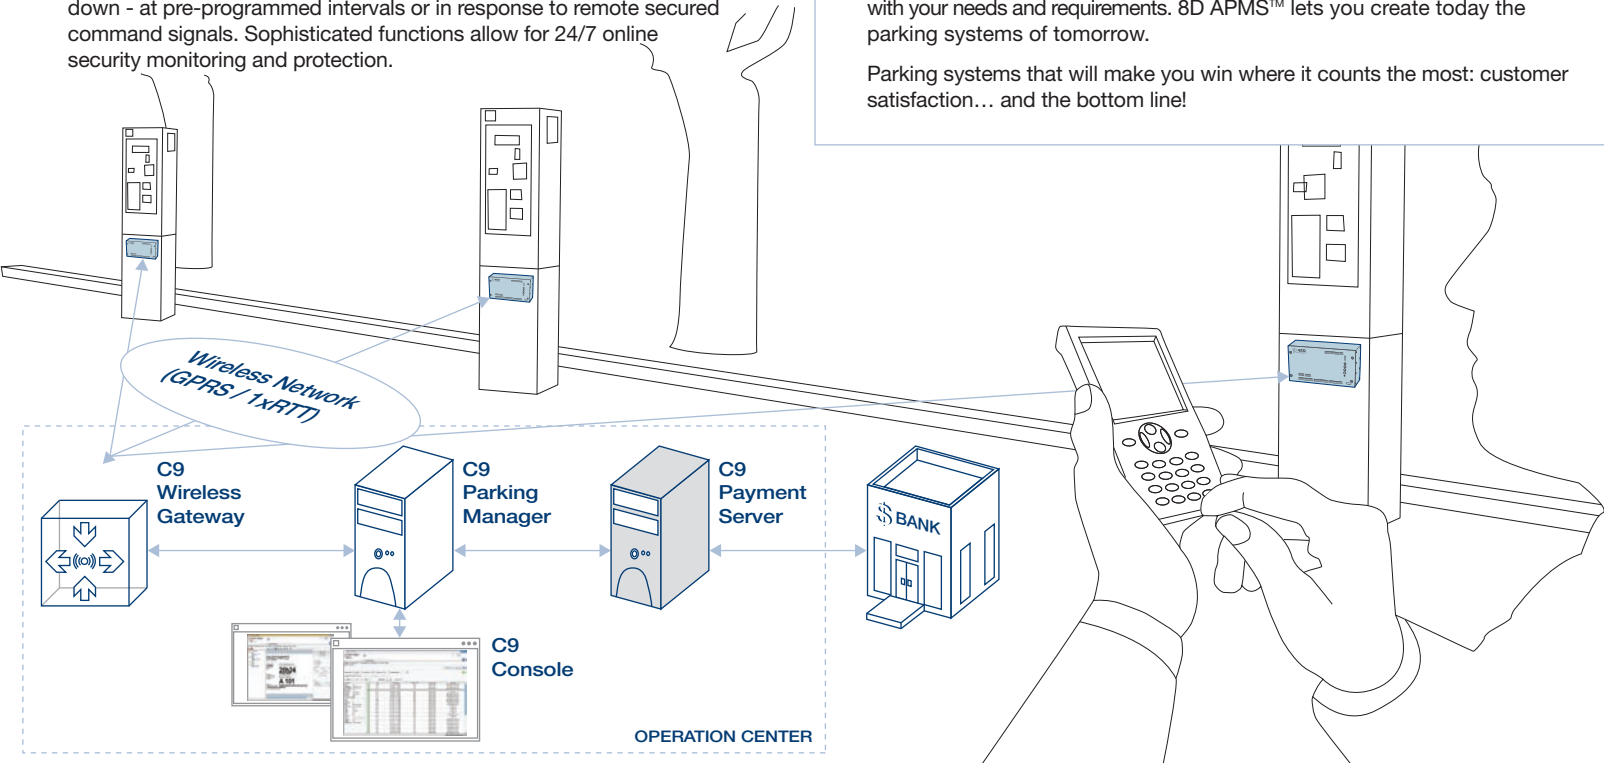

## 8D APMS: Unprecedented Low Power Components Management for All Climates

Besides its wireless capabilities, 8D APMS™ adds an unprecedented level of autonomy to all parking machines through sophisticated management of all internal devices and components such as display, processor, printers, and transmitting devices. In fact, it has been tested to offer reliable service in extreme weather conditions, working with simple batteries linked to small-sized solar panels. 8D APMS™ will automatically set itself to one of four modes - run, idle, sleep and shut down - at pre-programmed intervals or in response to remote secured command signals. Sophisticated functions allow for 24/7 online security monitoring and protection.

## 8D APMS: An Incredible Tool that Lets You Create Tomorrow's Parking Systems Today

If you feel limited by your current technology, 8D APMS™ will allow you to build the parking control and payment infrastructures you've been dreaming of designing for years, regardless of the equipments you choose. With advanced, intelligent functions, resilient hardware and superb management, you can pick your options and even implement them as you go, one step at the time. Entirely programmable, equally efficient in stand-alone units or as a centralized parking management system, 8D APMS™ will constantly evolve with your needs and requirements. 8D APMS™ lets you create today the parking systems of tomorrow.

Parking systems that will make you win where it counts the most: customer satisfaction... and the bottom line!

in Parking Management

### About 8D Technologies

Founded in 1996, 8D Technologies is a privately-held company delivering professional products and services highly targeted to the innovation and development of creative solutions in a variety of technological environments including Java, TCP/IP, Linux/Unix and wireless. 8D also develops leading-edge software packages, and is recognized internationally as an expert in the creation and the bringing-to-market of server-side applications and embedded systems for wireless, e-commerce, automotive, and other emerging markets.

8D also markets its 8D APMS™, a solution designed to be integrated to payment machines, allowing real time wireless electronic payment as well as remote control and management of the terminals and their internal sensors. 8D APMS™ is based on the Cloud9™ intelligent management system, also developed by 8D.
